Redesigning Life?

THE WORLDWIDE CHALLENGE TO Genetic Engineering

EDITED BY Brian Tokar
CRITICAL ACCLAIM FOR THIS BOOK

“The hazards of genetic engineering are among the most critical threats facing us. Knowledge is power. This book gives us power.”

FRANCES MOORE LAPPE, author of Diet for a Small Planet

“Biotechnology is truly revolutionary. But it is far from a precise science and the alliance of government, industry and universities to profit from genetic engineering has resulted in extravagant claims of benefits that are highly speculative. This book provides a welcome perspective that is missing from all the biotechnology hype. For anyone concerned about the real implications and potential hazards of gene manipulation, it is an excellent starting point.”

DR DAVID SUZUKI, geneticist and broadcaster

“This book explains why and how genetic engineering is adversely affecting our food, health, environment and human rights. It also shows what people are doing to counter the technology and the industry. It must be read by the public everywhere and by policymakers, especially in developing countries.”

MARTIN KHOR, Director of Third World Network

“In this wide-ranging collection, scientists and activists discuss the pressing issues growing out of the wanton commercialization of the life sciences. The authors illustrate the dangers inherent in the unfettered manipulation of plant, animal and human biology for health and societal wellbeing. They also document the growing worldwide resistance to attempts to engineer life in all its forms. An excellent guide to the brave new world of genetic engineering.”

RUTH HUBBARD, Professor Emerita of Biology at Harvard University, Board Member of the Council for Responsible Genetics

“The biotechnology industry has taken us beyond natural evolution into the unknown terrain of a never-to-be-natural-again world. We know nothing of the long-term biological, ecological, economic, public health and animal welfare consequences of this new technology. This book, with its excellent and wide-ranging coverage of this complex subject, will help us all awaken to the costs and potentially harmful, even catastrophic, consequences.”

DR MICHAEL W. FOX, Senior Scholar, Bioethics, The Humane Society of the United States, Washington, DC

“We are involved in a global war called genetic engineering. Most of us are totally unprepared to fight this war. Reading Redesigning Life? is mandatory if you want you and your offspring to enjoy life as we have known it.”

HOWARD F. LYMAN, President of EarthSave International, author of Mad Cowboy: Plain Truth From the Cattle Rancher Who Won’t Eat Meat

“A cutting-edge critique of today’s headlong rush toward genetic engineering and the ways in which a few corporate gene giants are dominating global food supplies and pirating the planet’s biodiversity, the human genome and the keys to life itself.”

HAZEL HENDERSON, author of Beyond Globalization and Building A Win-Win World
CRITICAL ACCLAM FOR THIS BOOK

The praise of names and reputation heaped upon any one man, but none is greater than the
Professor of the Department of English at Harvard University.

HAROLD M. CLARKE, President of Harvard University.

"I am most impressed with the scope and quality of the research presented in this book. It is a
must-read for anyone interested in the history of American literature."

STANLEY KLLER, Professor of American Literature, Stanford University.

"This book is a valuable contribution to our understanding of the development of American
literature. It will be an invaluable resource for students and scholars alike."
Redesigning Life? was first published by Zed Books Ltd, 7 Cynthia Street, London, N1 9JF, UK and Room 400, 175 Fifth Avenue, New York, NY 10010, USA in 2001.

Distributed in the United States exclusively by Palgrave, a division of St Martin's Press, LLC, 175 Fifth Avenue, New York, NY 10010, USA.
